Gavin Technologies:

Extending IAM Deployment Cycle to Facilitate Clients to Earn Faster ROI

Over the years, IAM (Identity Access Management) has emerged as a stand-alone, niche technical subject within IT Security. However, 2016 saw compliance pressures pushing enterprises to adopt IAM "suites" with features ranging from user provisioning to user access and user activity auditing. But compliance is only one part of the story. An un-tethered workforce that is less office bound than ever, is demanding remote access from a host of devices. And with those demands come requirements to secure those devices, as well as the networks to which they connect.

Headquartered in Bengaluru, Gavin Technologies offers an IAM Services Framework that unfolds a Deployment Cycle that helps organizations to achieve faster ROI. The company's IAM Architectural Framework provides a need to know based User Access Matrix. Moreover, the Rapid Integration Templates that houses On-boarding heterogeneous systems and the custom built organizational specific business process such as Recertification of

User Access induces effective user life cycle management. Offering a Single Sign-On (SSO) Services Framework, Gavin Technologies helps clients to integrate with their existing authentication mechanisms, while providing for role-based or specific attribute based authorization algorithms. Similarly, the solution deploys SSO across domains, applications and organization along with unified integrated portal (with IDM Solution) for additional access requests. The company aligns its solutions to the client's business by taking into consideration the security policies, governance model and the business goals & vision. After which, Gavin Technologies assess the As-Is state by gathering the applications & infrastructure in-scope and functional & Non-functional requirements among many others. "After we undertake these steps, we diligently apply IAM Operations' Best Practices to consolidate and re-engineer the business workflows to meet organization's objectives. Moreover, we involve technology & domain specialists to design & architect IAM Solutions. These specialists work closely with customer's technology & business stakeholders to arrive at robust & strategic IAM Architecture. We constantly strive to provide highest quality of IAM Solutions to our clients," says Girish H A, CEO.

identity management migration, Gavin Technologies stepped up and efficaciously carried out the process.

Well versed in risk assessments, consulting and deployment around IAM solutions, Gavin Technologies was chosen from its sea of competitors to deploy Identity Management Solution for a leading airline in Sri Lanka.

Since its inception in 2008, the company has had its unwavering focus on Information Security. Gavin Technologies intends to create an IAM SOC thus envisaging to be the trusted IAM advisor and leader in the IAM domain. Working closely with Industry Leading Information Security Vendors and System Integrators to create 'Success Together' eco-system, Gavin Technologies has successfully delivered complex Information Security projects with highest standards of quality. "We work hard to exceed our customer's expectations with the vision to be their trusted Information Security solution and services partner," concludes Vijayalakshmi, Founder & Managing Director. CR
